COMMUNICATION TECHNOLOGY (Media & Infrastructure)

Why Satellites?

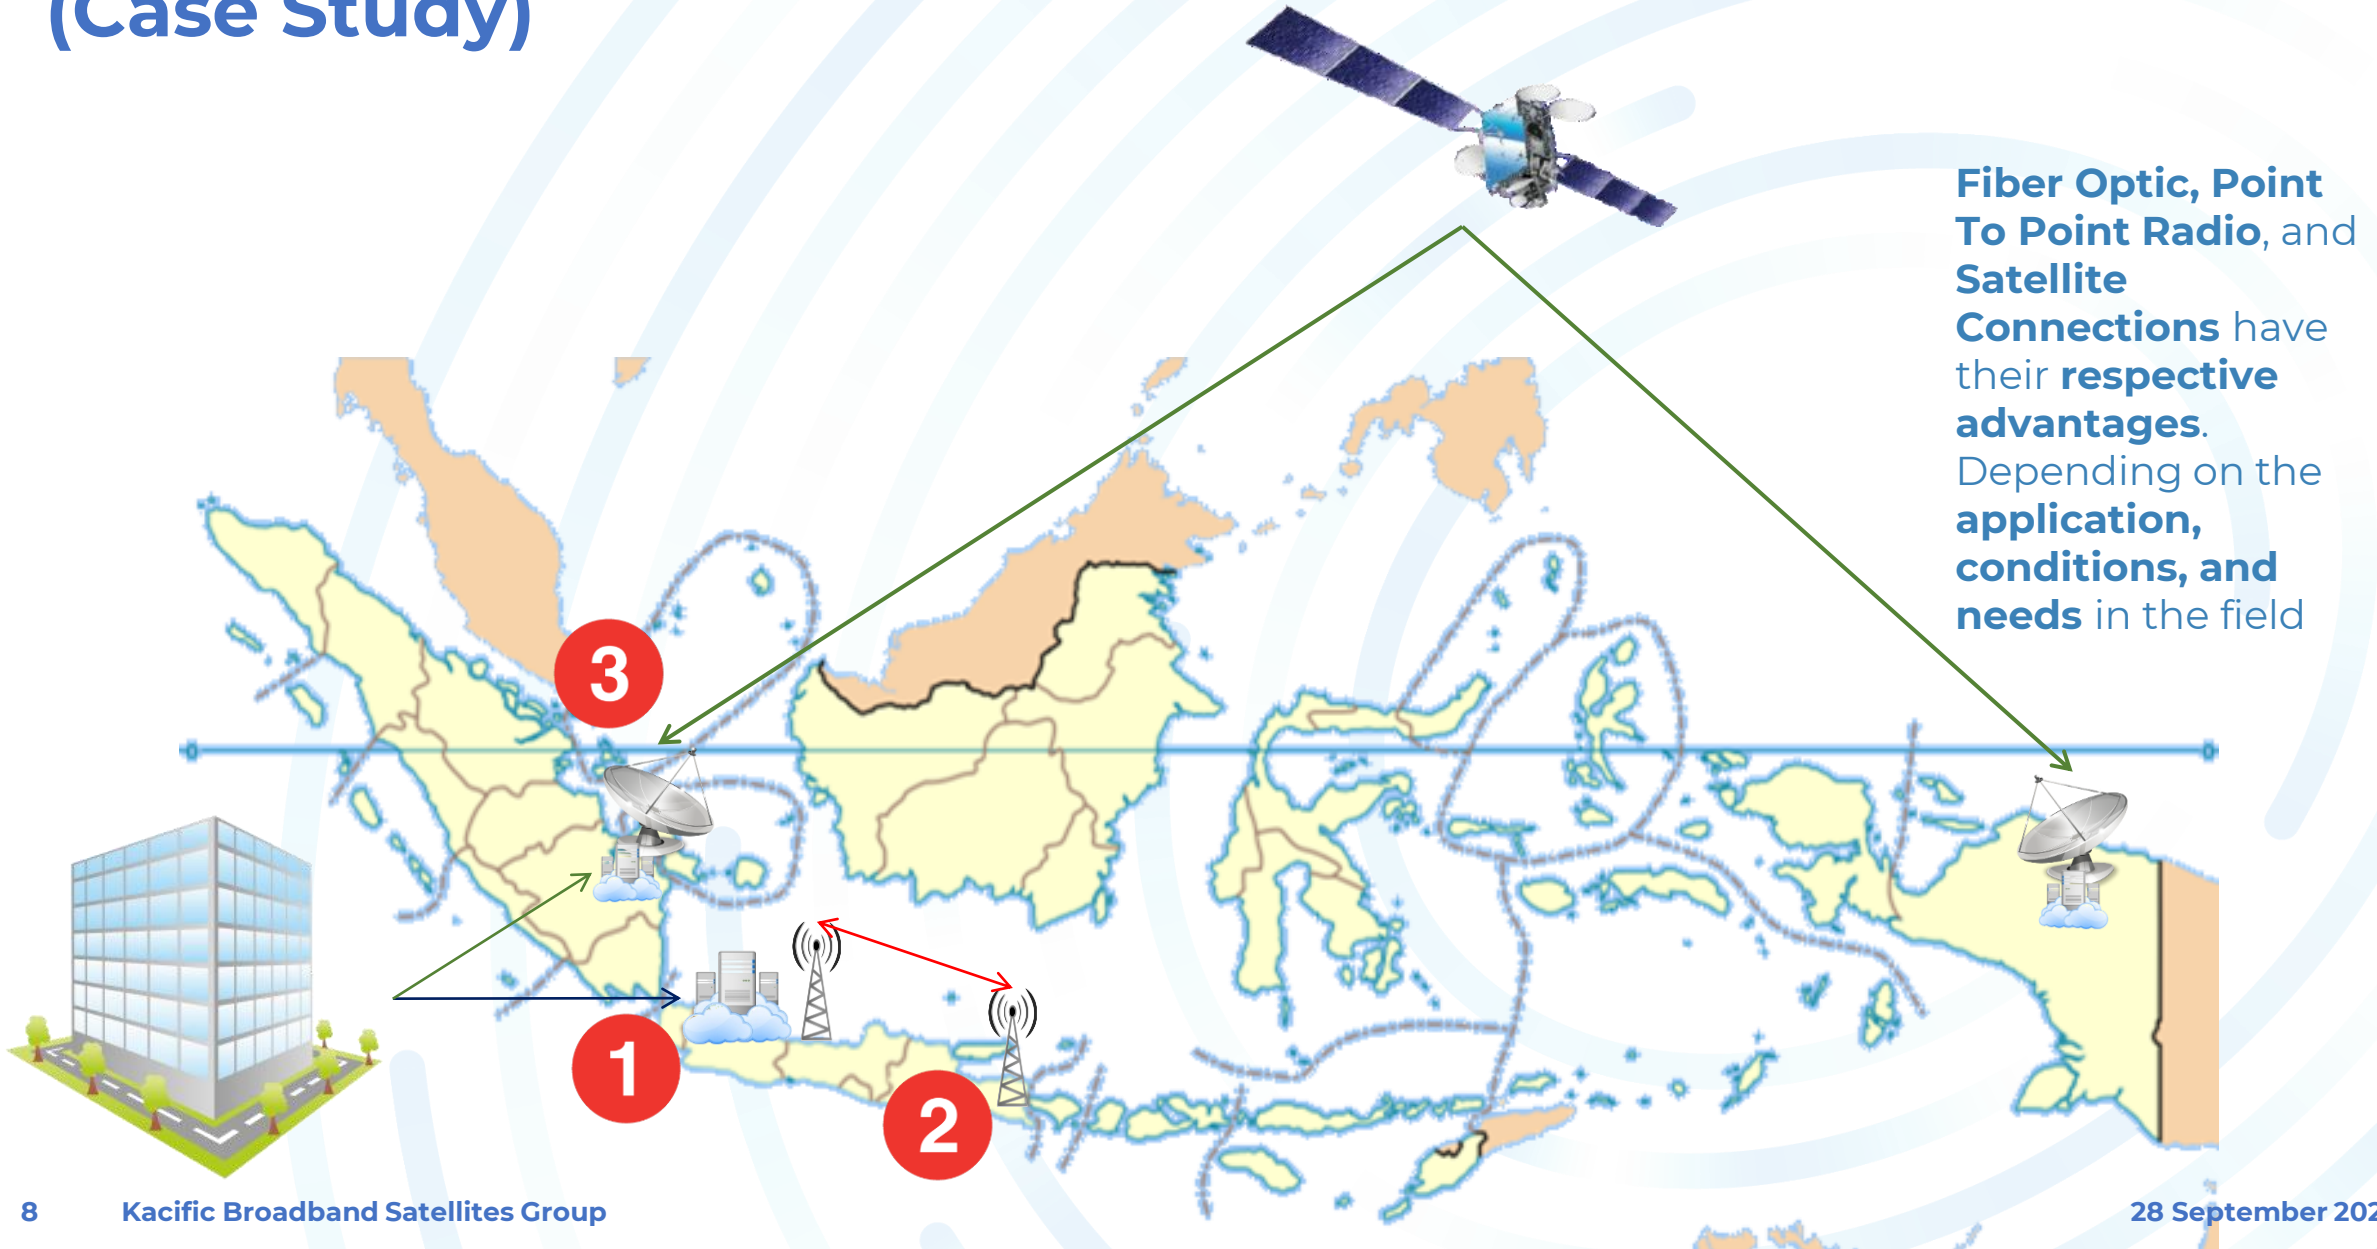

- Satellites can overcome several things that can become obstacles to terrestrial telecommunications systems whether it's time, distance, or even the complexity of the content.
- With satellite, remote areas can easily have the same communication system as in cities and can connect with other areas more quickly.
- Satellites have a wide coverage area, thus, large bandwidth and faster installation with diverse service characteristics.
- Indonesia needs satellites because it consists of several islands and diverse geographical contours, which will be very difficult for terrestrial communication systems to cover the entire territory.
- Satellite is also a solution for equal distribution of telecommunication access to remote areas of Indonesia.

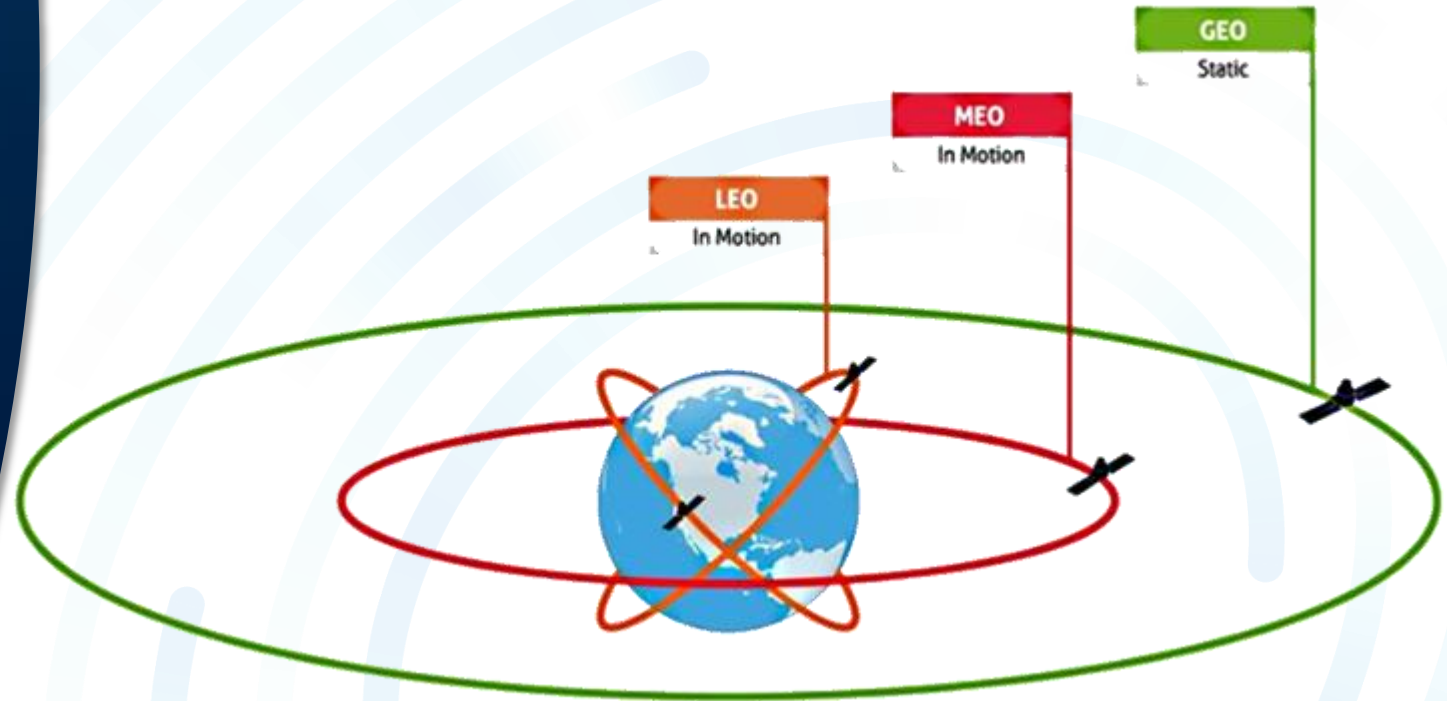

INTERNET SATELLITE

EFFECTIVE & EFFICIENT CONNECTIVITY (Case Study)

SATELLITE ORBITS

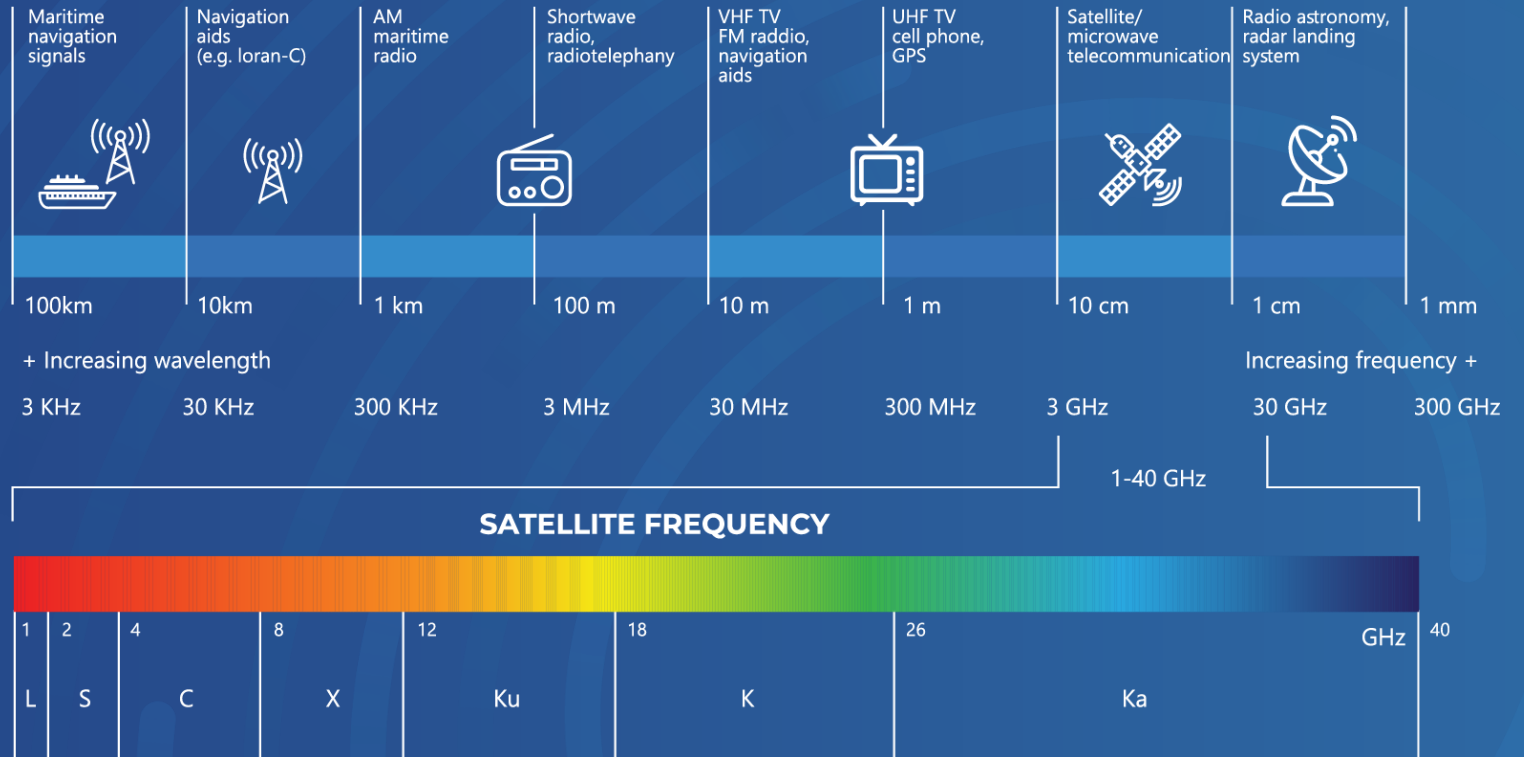

Parameter	LEO	MEO	GEO
Orbit altitude	≈ 1,000 km	10,000 km	36,000 km
Orbit period	≈ 105 min	6.5 h	24 h
Satellite visibility	≈ 17 min	130 min	24 h
Satellites required	≈ 40–70	10–15	3–5
Signal delay (2-way)	6.6 ms	66 ms	240 ms
Free space loss at 150 MHz	136 dB	(156 dB)	(167 dB)
at 1.5 GHz	156 dB	176 dB	187 dB
Global coverage	Yes	Yes	No
System complexity	Med./high	Low/med.	Low

TECHNOLOGY

KA-BAND

Kacific1 uses high-frequency Ka-band spectrum and technology. The concentrated spot beams are high power, resulting in availabilities between 99.1% and 99.9%.

TECHNICAL SPECIFICATIONS

Designed and manufactured by Boeing

56 high throughput spot beams

Delivering up to 60 Gbps of broadband capacity

550 to 600 ms latency

Ka-band system

Geostationary orbit 35,786km above equator

13 kw of electric power

TECHNOLOGY

HIGH THROUGHPUT

Kacific1 is a High Throughput Satellite (HTS) which reuses the same spectrum (frequencies) multiple times in 56 spot beams. Total HTS throughput is much higher than traditional FSS satellites, which can use the spectrum only once. This results in greater spectral efficiency and therefore lower cost per bandwidth.

GEOSTATIONARY

Satellites placed in geostationary orbit offer a very stable and consistent service and user experience. The signal only requires a simple antenna, with no moving parts for reception and transmission. Geostationary satellite latency is suitable for nearly all regular internet usage, such as video streaming, voice calls over IP, general browsing and even for distribution via 3G or 4G networks.

ABOUT US

Kacific Broadband Satellites Group is a next-generation broadband satellite operator that provides universal access at an affordable cost using proven satellite technologies.

Founded in 2013, Kacific is backed by a group of experienced investors in international telecommunications infrastructure.

On 16 December 2019, Kacific launched its first satellite, Kacific1. The satellite became operational on 27 January 2020 and provides more than 50Gbps of internet capacity throughout South East Asia and the Pacific.

Kacific Services

High-speed internet. Unlimited
data plans. Competitive pricing.

GigStarter

Easy. Affordable. Broadband everywhere.

Powerful satellite service

Paid per terminal per month

75cm, 1.2m, or 1.8m satellite dishes

Fully managed service including teleport

RESIDENTIAL

Up to 40 Mbps access speeds

(up to 30 Mbps downlink +10 Mbps uplink)

ENTERPRISE

Up to 120 Mbps access speeds

(up to 100 Mbps downlink + 20 Mbps uplink)

Community WiFi

More customers, less cost with voucher-enabled WiFi hotspots

Your own WiFi Access Point: a wireless router with a built-in voucher billing system.

Leverages Kacific WiFi server system deployed throughout Asia-Pacific

Up to 85 Mbps access speeds
(up to 70 Mbps downlink + 15 Mbps uplink)

Lightly contended with low congestion

Fully managed service including teleport

75cm or 1.2m Satellite dish

GigWiFi

The best of GigStarter & Community WiFi

Powerful satellite broadband

Paid per month per site

Up to 55 Mbps access speeds
(up to 50 Mbps downlink + 5 Mbps uplink)

1.2 m or 1.8m satellite dish

Your own WiFi Access Point: a wireless router with a built-in voucher billing system

24/7 online server access for WiFi voucher

CCTV and Remote Data Collection

Protect your premises , no matter where.

Rapidly deployed and effortlessly scaled network

Powerful 75cm or 1.2m fixed or transportable satellite dishes

Comes with secured cloud data storage or dedicated physical data storage of secured location

Flexible plans available: security monitoring with or without internet bundle

Internet of Things

Connect & monitor with on-site high-speed Internet.

- 10 MBPS
(5 Mbps downlink + 5 Mbps uplink)

Easy, rapid installation

Pay-as-you-go plan

75cm, 1m or 1.2m satellite dish

CommsBox

Be prepared. Respond faster.

All-in-one
boxed solution

Connects 5 users

High-speed internet
on-demand with
powerful broadband
satellite service

Up to 55 Mbps access speeds
(up to 50 Mbps downlink + 5
Mbps uplink)

Rapidly deployed and
effortlessly scaled

Reliable, on-demand
connectivity

Each Kacific CommsBox includes:

- Small, self-installing satellite dish in a self-contained case
- Preconfigured and connected modem and satellite electronics
- Solar-power energy pack
- User tablets for customer-friendly operation
- WiFi set up
- A sealed, shock-resistant, fire-resistant, buoyant and transportable all-inclusive container

Enterprise Backup

Stay connected 24/7 with local internet back-up.

High-speed internet on-demand with powerful broadband satellite service

Can be deployed anywhere in city, suburban or rural branches requirements

No hidden costs, works like an insurance policy on your connectivity

Built into your existing solution

Satellite dish sizes – 75cm, 1.2m, 1.8m or larger

Highly secure and stable connection

KACIFIC SERVE CONNECTIONS FOR CSTS MINE LOCATIONS IN TANGGUH - PAPUA

Stay connected 24/7 with a large capacity broadband internet connection in hard-to-reach locations on terrestrial telecommunications networks

Challenge

Providing high quality universal broadband access at affordable prices throughout Indonesia for 8,000 to 8,000. 10,000 internet users at gas exploration sites in Papua

Solution

Kacific1 satellite can support connections with speeds above 180 Mbps which can serve all internet users in that location for 7/24

Results

Communication and coordination of work becomes smoother and can increase company efficiency due to more affordable service prices

Membangun Indonesia

Kisah dari Tanah Sumatera

BAKTI

Universal Service Obligation (USO) Fund to connect Villages , Hospital & Government Facilities in Indonesia

Project

Deployed 2,575 sites through two ISP providers in Indonesia to participate in Bakti project.

Olocal partners in Indonesia have engaged with dozen of installers in different parts of Indonesia to deploy the broadband network in 5 months.

*Project commenced in July 2021 and **5,150 Mbps** is provisioned across the network. The internet connectivity service is provided at **10Mbps** in speed for each site.*

Duration

Four years part of the Universal Service Obligation fund to connect crucial remote areas.

Outcome

Access to reliable connectivity for communities, healthcare centers & Government facilities in underserved and unserved areas.
